

COMPETITIVE INTELLIGENCE REPORT

TCR-Based Therapies in Solid Tumors

Strategic Positioning Analysis for Immatics N.V.

Prepared Exclusively for

Harpreet Singh, PhD

CEO, Immatics N.V.

May 2026 | CONFIDENTIAL

Disclaimer & Methodology

Data Sources: All data points sourced from public registries accessed 27 May 2026: ClinicalTrials.gov, EMA Human Medicines Register, PubMed.

Intended Use: Internal strategic use by Immatics management.

Report generated: 27 May 2026 | Prepared by: Biotech-Intelligence

1. Executive Summary

Immatics N.V. (NASDAQ: IMTX) is a German/US clinical-stage biopharmaceutical company developing TCR-based immunotherapies for solid tumors. With two complementary platforms — ACTengine (TCR-T cell therapy) and TCER (T-cell engaging receptor bispecifics) — Immatics addresses the fundamental challenge of targeting intracellular tumor antigens.

1.1 Key Findings

- 1. Ph3 Data Pending — A Defining Moment for TCR-T:** The SUPRAME trial (NCT06743126) randomizing IMA203 vs investigator's choice in melanoma is Immatics' first Phase 3. A positive readout would validate TCR-T as a modality in solid tumors.
- 2. PRAME is a High-Value Target:** PRAME is expressed across melanoma, sarcoma, NSCLC, ovarian, head-neck cancer with minimal normal tissue expression. Nature Medicine 2025 (PMID 40205198) published interim Ph1 data.
- 3. Dual Modality Strategy De-Risks:** ACTengine (TCR-T) and TCER (off-the-shelf bispecific) address different market segments. TCER could provide a scalable alternative if TCR-T manufacturing proves challenging.
- 4. 5 Active Trials — Focused Pipeline:** IMA203 (Ph3), IMA203CD8, IMA203 + mRNA-4203 combo, IMA401, IMA402 — all targeting PRAME or MAG family antigens.
- 5. Financial Position:** ~\$200-300M market cap (NASDAQ). Key inflection point is SUPRAME enrollment completion and interim analysis.

2. Company & Pipeline

2.1 Corporate Profile

Parameter	Value
Company	Immatics N.V.
Ticker	IMTX (NASDAQ)
HQ	Tübingen, Germany / Houston, USA
CEO	Harpreet Singh, PhD
Market Cap	~\$200-300M
Platforms	ACTengine (TCR-T) + TCER (bispecific)
Primary Target	PRAME (IMA203, IMA402)

2.2 Pipeline

Asset	Platform	Target	Phase	Status
IMA203	ACTengine TCR-T	PRAME	Ph3 (melanoma) + Ph1/2	RECRUITING
IMA203CD8	ACTengine TCR-T	PRAME	Ph1/2	RECRUITING
IMA203 + mRNA-4203	ACTengine + mRNA	PRAME	Ph1	RECRUITING
IMA401	TCER bispecific	MAG family	Ph1	ACTIVE_NOT_RECRUITING
IMA402	TCER bispecific	PRAME	Ph1/2	RECRUITING

Source: [ClinicalTrials.gov](https://clinicaltrials.gov), accessed 2026-05-27

2.3 TCR-T vs CAR-T

Parameter	CAR-T	TCR-T (Immatics)
Antigen Recognition	Surface only	Intracellular + surface (via HLA)
Solid Tumor Efficacy	Limited	Promising (Nature Med 2025)

Proteome Access	~20%	~80%
CRS/ICANS Risk	High	Lower

3. Competitive Landscape

3.1 TCR Therapy Competitors

Company	Program	Target	Phase
Immatics	IMA203	PRAME	Ph3
Adaptimmune	Afami-cel	MAGE-A4	Approved (US 2024)
Immunocore	Kimtrak	gp100 (ImmTAC)	Approved (US/EU 2022)
TScan Therapeutics	TSC-100/101	HA-1/HA-2	Ph1

Context: Adaptimmune's afami-cel (Tecelra) is the first FDA-approved TCR-T (2024), but commercial uptake has been limited. Immatics' SUPRAME targets a larger market (melanoma) with a broader target (PRAME).

3.2 PRAME Target Advantage

PRAME expression: Melanoma ~90%, synovial sarcoma ~80%, NSCLC ~50%, ovarian ~40%.
Minimal normal tissue expression — favorable therapeutic index.

4. Catalysts & Strategy

4.1 Key Catalysts

Event	Timeline	Impact
SUPRAME Ph3 enrollment completion	2026-2027	First TCR-T Ph3 in solid tumors
IMA203 Ph1/2 updated data	2026	Efficacy readout beyond melanoma
IMA402 Ph1 dose data	2026-2027	First off-the-shelf PRAME bispecific data
IMA203 + mRNA-4203 combo data	2027	TCR-T + mRNA vaccine combination

4.2 Strategic Recommendations

1. SUPRAME is Everything. First Ph3 TCR-T trial in solid tumors. Focus all resources on enrollment and data quality.

2. Nature Medicine Publication is a Key Asset. Peer-reviewed validation of IMA203. Use for KOL engagement and investor positioning.

3. TCER Provides Upside. IMA402 success transforms Immutics from cell therapy company to platform company.

4. mRNA-4203 Combo is High-Risk, High-Reward. Novel approach to enhance T-cell persistence.

5. Key Takeaways for Harpreet Singh

1. Most Advanced TCR-T Company Globally. Ph3 melanoma trial + Nature Medicine publication + dual-platform strategy. The next 12-18 months are defining.

2. PRAME is a Superior Target. High tumor expression, low normal tissue expression. Immatics' IP around PRAME-directed TCRs is a significant asset.

3. Manufacturing Remains a Challenge. TCER platform (IMA402) offers off-the-shelf alternative — could be transformative if successful.

4. Competitive Field Consolidating. Adaptimmune/TCRT merger, Immunocore's success create both pressure and partnering opportunities.

5. Cash Runway to Catalysts is Critical. Prioritize SUPRAME + IMA402 if resources become constrained.
